1 Key Properties

Ocean Biogeochemistry key properties

1.1.1 Top level properties

Ocean Biogeochemistry key properties

1.1.1.1 Name *

Name of ocnbgchem model code

NEMO : Nucleus for European Modelling of the Ocean (TOP/PISCES)

1.1.1.2 Keywords *

Keywords associated with ocnbgchem model code

Enter COMMA SEPARATED list:

1.1.1.3 Overview *

Overview of ocnbgchem model.

PISCES (Pelagic Interaction Scheme for Carbon and Ecosystem Studies) (Aumont and Bopp, 2006) simulates the cycling of carbon, oxygen, and of the major nutrients determining phytoplankton growth (phosphate, nitrate, ammonium, iron and silicic acid). The carbon chemistry of the model is based on the Ocean Carbon Model Intercomparison Project (OCMIP2) protocol (Najjar et al, 2007) and the parametrization proposed by Wanninkhof (1992) is used to compute air-sea gas exchange of CO₂ and O₂. PISCES includes a simple representation of the marine ecosystem with two phytoplankton size classes, representing nanophytoplankton and diatoms, as well as two zooplankton size classes, representing microzooplankton and mesozooplankton. Phytoplankton growth is limited by the availability of nutrients, temperature, and light. There are three non-living components of organic carbon in the model: semi-labile dissolved organic carbon (DOC), with a lifetime of several weeks to years, as well as large and small detrital particles, which are fuelled by mortality, aggregation, fecal pellet production and grazing. Biogenic silica and calcite particles are also included. Nutrients and/or carbon are supplied to the ocean from three different sources: atmospheric deposition, rivers and sediment mobilization. These sources are explicitly included but do not vary in time apart from a climatological seasonal cycle for the atmospheric input. Atmospheric deposition (Fe, N, P and Si) has been estimated from the INCA model (Aumont et al, 2008). River discharge of carbon and nutrients is taken from Ludwig et al (1996). Iron input from sediment mobilization has been parameterized as in Aumont and Bopp (2006). PISCES is used here not only to compute air-sea fluxes of carbon, but also to compute the effect of a biophysical coupling: the chlorophyll concentration produced by the biological component retroacts on the ocean heat budget by modulating the absorption of light as well as the oceanic heating rate (see Lengaigne et al (2007) for a detailed description).

1.1.1.4 Model Type *

Type of ocean biogeochemistry model

Select SINGLE option:

- ☐ Geochemical - No living compartments
- ☐ NPZD - No plankton types

- ☐ PFT - Several plankton types
- ☐ Other - please specify:

1.1.1.5 Elemental Stoichiometry *

Describe elemental stoichiometry (fixed, variable, mix of the two)

Select **SINGLE** option:

- ☐ Fixed - Fixed stoichiometry
- ☐ Variable - Variable stoichiometry
- ☐ Mix of both - Both fixed and mixed stoichiometry

1.1.1.6 Elemental Stoichiometry Details *

Describe which elements have fixed/variable stoichiometry

Enter **COMMA SEPARATED** list:

1.1.1.7 Prognostic Variables *

List of all prognostic tracer variables in the ocean biogeochemistry component

Dissolved inorganic carbon, Total alkalinity, dissolved oxygen, Calcite, Phosphate, Small particulate organic carbon, silicate, Nanophytoplankton, Microzooplankton, Semi-labile dissolved organic carbon, Diatoms, Mesozooplankton, Silicon content of the diatoms, Dissolved iron, Iron in the big particles, Big particulate organic carbon, Iron in the small particles, Iron content of the diatoms, Sinking biogenic silica, Iron content of the nanophytoplankton, Chlorophyll of the nanophytoplankton, Chlorophyll of the diatoms, Nitrate, Ammonium

1.1.1.8 Diagnostic Variables *

List of all diagnostic tracer variables in the ocean biogeochemistry component (derived from prognostic variables)

Enter **COMMA SEPARATED** list:

1.1.1.9 Damping

Describe any tracer damping used (such as artificial correction or relaxation to climatology,...)

Enter **TEXT**:

1.1.2 Passive Tracers Transport

Time stepping method for passive tracers transport in ocean biogeochemistry

1.1.2.1 Method *

Time stepping framework for passive tracers

- ☐ Use ocean model transport time step

☐ Use specific time step

1.1.2.2 Timestep If Not From Ocean

Time step for passive tracers (if different from ocean)

Enter INTEGER value:

1.1.3 Biology Sources Sinks

Time stepping framework for biology sources and sinks in ocean biogeochemistry

1.1.3.1 Method *

Time stepping framework for biology sources and sinks

Select SINGLE option:

☐ Use ocean model transport time step

☐ Use specific time step

1.1.3.2 Timestep If Not From Ocean

Time step for biology sources and sinks (if different from ocean)

Enter INTEGER value:

1.2.1 Transport Scheme

Transport scheme in ocean biogeochemistry

1.2.1.1 Type *

Type of transport scheme

Select SINGLE option:

☐ Offline

☐ Online

1.2.1.2 Scheme *

Transport scheme used

Select SINGLE option:

☐ Use that of ocean model

☐ Other - please specify:

1.2.1.3 Use Different Scheme

Describe transport scheme if different than that of ocean model

Enter TEXT:

1.3.1 Boundary Forcing

Properties of biogeochemistry boundary forcing

1.3.1.1 Atmospheric Deposition *

Describe how atmospheric deposition is modeled

Select SINGLE option:

- ☐ From file (climatology)
- ☐ From file (interannual variations)
- ☐ From Atmospheric Chemistry model

1.3.1.2 River Input *

Describe how river input is modeled

Select SINGLE option:

- ☐ From file (climatology)
- ☐ From file (interannual variations)
- ☐ From Land Surface model

1.3.1.3 Sediments From Boundary Conditions

List which sediments are specified from boundary condition

Enter COMMA SEPARATED list:

1.3.1.4 Sediments From Explicit Model

List which sediments are specified from explicit sediment model

Enter COMMA SEPARATED list:

1.4.1 Gas Exchange

Properties of gas exchange in ocean biogeochemistry

1.4.1.1 CO2 Exchange Present *

Is CO2 gas exchange modeled ?

- ☒ True ☐ False

1.4.1.2 CO2 Exchange Type

Describe CO2 gas exchange

- ☐ OMIP protocol
- ☐ Other - please specify:

1.4.1.3 O2 Exchange Present *

Is O2 gas exchange modeled ?

- ☒ True ☐ False

1.4.1.4 O2 Exchange Type

Describe O2 gas exchange

- ☐ OMIP protocol
- ☐ Other - please specify:

1.4.1.5 DMS Exchange Present *

Is DMS gas exchange modeled ?

- ☒ True ☐ False

1.4.1.6 DMS Exchange Type

Specify DMS gas exchange scheme type

Enter TEXT:

1.4.1.7 N2 Exchange Present *

Is N2 gas exchange modeled ?

- ☒ True ☐ False

1.4.1.8 N2 Exchange Type

Specify N2 gas exchange scheme type

Enter TEXT:

1.4.1.9 N2O Exchange Present *

Is N2O gas exchange modeled ?

- ☒ True ☐ False

1.4.1.10 N2O Exchange Type

Specify N2O gas exchange scheme type

Enter TEXT:

1.4.1.11 CFC11 Exchange Present *

Is CFC11 gas exchange modeled ?

Select either TRUE or FALSE:

☐ True ☐ False

1.4.1.12 CFC11 Exchange Type

Specify CFC11 gas exchange scheme type

Enter TEXT:

1.4.1.13 CFC12 Exchange Present *

Is CFC12 gas exchange modeled ?

Select either TRUE or FALSE:

☐ True ☐ False

1.4.1.14 CFC12 Exchange Type

Specify CFC12 gas exchange scheme type

Enter TEXT:

1.4.1.15 SF6 Exchange Present *

Is SF6 gas exchange modeled ?

Select either TRUE or FALSE:

☐ True ☐ False

1.4.1.16 SF6 Exchange Type

Specify SF6 gas exchange scheme type

Enter TEXT:

1.4.1.17 13CO2 Exchange Present *

Is 13CO2 gas exchange modeled ?

Select either TRUE or FALSE:

☐ True ☐ False

1.4.1.18 $^{13}\text{CO}_2$ Exchange Type

Specify $^{13}\text{CO}_2$ gas exchange scheme type

Enter TEXT:

1.4.1.19 $^{14}\text{CO}_2$ Exchange Present *

Is $^{14}\text{CO}_2$ gas exchange modeled ?

Select either TRUE or FALSE:

☐ True ☐ False

1.4.1.20 $^{14}\text{CO}_2$ Exchange Type

Specify $^{14}\text{CO}_2$ gas exchange scheme type

Enter TEXT:

1.4.1.21 Other Gases

Specify any other gas exchange

Enter TEXT:

1.5.1 Carbon Chemistry

Properties of carbon chemistry biogeochemistry

1.5.1.1 Type *

Describe how carbon chemistry is modeled

Select SINGLE option:

☐ OMIP protocol
☐ Other protocol

1.5.1.2 Ph Scale

If NOT OMIP protocol, describe pH scale.

☒ Sea water
☐ Free
☐ Other - please specify:

1.5.1.3 Constants If Not OMIP

If NOT OMIP protocol, list carbon chemistry constants.

Enter COMMA SEPARATED list:

1.6.1 Tuning Applied

Tuning methodology for ocean biogeochemistry component

1.6.1.1 Description *

General overview description of tuning: explain and motivate the main targets and metrics retained. and Document the relative weight given to climate performance metrics versus process oriented metrics, and on the possible conflicts with parameterization level tuning. In particular describe any struggle and with a parameter value that required pushing it to its limits to solve a particular model deficiency.

Enter TEXT:

1.6.1.2 Global Mean Metrics Used

List set of metrics of the global mean state used in tuning model/component

Enter COMMA SEPARATED list:

1.6.1.3 Regional Metrics Used

List of regional metrics of mean state used in tuning model/component

Enter COMMA SEPARATED list:

1.6.1.4 Trend Metrics Used

List observed trend metrics used in tuning model/component

Enter COMMA SEPARATED list:

2 Tracers

Ocean biogeochemistry tracers

2.1.1 Top level properties

Ocean biogeochemistry tracers

2.1.1.1 Name

Commonly used name for the tracers in ocnbgchem model.

Enter TEXT:

2.1.1.2 Overview

Overview of ocean biogeochemistry tracers in ocnbgchem model.

Enter TEXT:

2.1.1.3 Sulfur Cycle Present *

Is sulfur cycle modeled ?

☒ True ☐ False

2.1.1.4 Nutrients Present *

List nutrient species present in ocean biogeochemistry model

Select MULTIPLE options:

- ☐ Nitrogen (N)
- ☐ Phosphorous (P)
- ☐ Silicon (S)
- ☐ Iron (Fe)
- ☐ Other - please specify:

2.1.1.5 Nitrous Species If N

If nitrogen present, list nitrous species.

Select MULTIPLE options:

- ☐ Nitrates (NO3)
- ☐ Amonium (NH4)
- ☐ Other - please specify:

2.1.1.6 Nitrous Processes If N

If nitrogen present, list nitrous processes.

Select MULTIPLE options:

- ☐ Dentrification
- ☐ N fixation
- ☐ Other - please specify:

2.2.1 Ecosystem

Ecosystem properties in ocean biogeochemistry

2.2.1.1 Upper Trophic Levels Definition *

Describe how upper trophic levels are defined in model (e.g. based on size)

Enter TEXT:

2.2.1.2 Upper Trophic Levels Treatment *

Describe how upper trophic levels are treated in model

Enter TEXT:

2.2.2 Phytoplankton

Phytoplankton properties in ocean biogeochemistry

2.2.2.1 Type *

Type of phytoplankton

Select SINGLE option:

- ☐ None
- ☐ Generic
- ☐ PFT including size based (specify both below) - Plankton functional type including size based
- ☐ Size based only (specify below)
- ☐ PFT only (specify below)

2.2.2.2 Pft

Phytoplankton functional types (PFT) (if applicable)

Select MULTIPLE options:

- ☐ Diatoms

- ☐ Nfixers
- ☐ Calcifiers
- ☐ Other - please specify:

2.2.2.3 Size Classes

Phytoplankton size classes (if applicable)

Select MULTIPLE options:

- ☐ Microphytoplankton
- ☐ Nanophytoplankton
- ☐ Picophytoplankton
- ☐ Other - please specify:

2.2.3 Zooplankton

Zooplankton properties in ocean biogeochemistry

2.2.3.1 Type *

Type of zooplankton

- ☐ None
- ☐ Generic
- ☐ Size based (specify below)
- ☐ Other - please specify:

2.2.3.2 Size Classes

Zooplankton size classes (if applicable)

Select MULTIPLE options:

- ☐ Microzooplankton
- ☐ Mesozooplankton
- ☐ Other - please specify:

2.3.1 Dissolved Organic Matter

Dissolved organic matter properties in ocean biogeochemistry

2.3.1.1 Bacteria Present *

Is there bacteria representation ?

Select either **TRUE** or **FALSE**:

- ☐ True ☐ False

2.3.1.2 Lability *

Describe treatment of lability in dissolved organic matter

- ☐ None
- ☐ Labile - Less than a few days
- ☐ Semi-labile - Few days to a few years
- ☐ Refractory - Over a few years
- ☐ Other - please specify:

2.4.1 Particules

Particulate carbon properties in ocean biogeochemistry

2.4.1.1 Method *

How is particulate carbon represented in ocean biogeochemistry?

- ☐ Diagnostic
- ☐ Diagnostic (Martin profile)
- ☐ Diagnostic (Balast)
- ☒ Prognostic
- ☐ Other - please specify:

2.4.1.2 Types If Prognostic

If prognostic, type(s) of particulate matter taken into account

Select **MULTIPLE** options:

- ☐ POC
- ☐ PIC (calcite)
- ☐ PIC (aragonite)
- ☐ BSi
- ☐ Other - please specify:

2.4.1.3 Size If Prognostic

If prognostic, describe if a particle size spectrum is used to represent distribution of particles in water volume

Select SINGLE option:

- ☐ No size spectrum used
- ☐ Full size spectrum
- ☐ Discrete size classes (specify which below)

2.4.1.4 Size If Discrete

If prognostic and discrete size, describe which size classes are used

Enter TEXT:

2.4.1.5 Sinking Speed If Prognostic

If prognostic, method for calculation of sinking speed of particles

Select SINGLE option:

- ☐ Constant
- ☐ Function of particle size
- ☐ Function of particle type (ballast)
- ☐ Other - please specify:

2.5.1 Dic Alkalinity

DIC and alkalinity properties in ocean biogeochemistry

2.5.1.1 Carbon Isotopes *

Which carbon isotopes are modelled (C13, C14)?

Select MULTIPLE options:

- ☐ C13
- ☐ C14)

2.5.1.2 Abiotic Carbon *

Is abiotic carbon modelled ?

Select either TRUE or FALSE:

- ☐ True
- ☐ False

2.5.1.3 Alkalinity *

How is alkalinity modelled ?

Select **SINGLE** option:

☐ Prognostic

☐ Diagnostic)
